PROFILE

Cybersecurity MSc student at Lancaster University and Computer Science graduate with hands-on experience designing SOCs, conducting penetration tests, and applying Cyber-Informed Engineering to OT and Critical National Infrastructure environments. I combine a security-first mindset with full-stack development experience across Python, C#, Java, networking, and modern infrastructure tooling. I am a dependable and analytical team contributor who communicates clearly, takes ownership of complex tasks, learns quickly, and welcomes constructive feedback. My organised approach, leadership potential, curiosity, and commitment to continuous self-improvement help me collaborate effectively while delivering practical, well-documented solutions.

EXPERIENCE

Intern, Software Engineer – Microtel S.r.l, Morrovalle, Italy Oct 2024 - Apr 2025

- Engineered a network monitoring platform from scratch (ASP.NET Core MVC, C#), integrating Zabbix, Ninja, UniFi, and Omada.
- Built real-time Email/Telegram alerting and per-client dashboards; deployed internally.

Freelance Technical Consultant – masksikriexports.in 2021 - Present

- Helped design and maintain a website for a family business, contributing to configuration, hosting, deployment, and general technical setup.
- Provided hardware assistance and practical technical consultancy while learning to assess requirements, troubleshoot issues, and deliver reliable solutions independently.

PROJECTS

MSc Dissertation: Quantitative CIE-Informed OT Change Management Mar 2026 - Aug 2026

- Designing a novel quantitative scoring framework (CCIM) operationalising Cyber-Informed Engineering Principles for Critical National Infrastructure OT change management.
- Building a Python-based Monte Carlo simulation and graph-topology model to calibrate risk thresholds and evaluate attack-surface impact of OT changes.

SOC Implementation (BSc Dissertation) Dec 2024 - Apr 2025

- Designed and built a fully operational SOC for SMEs using Wazuh, pfSense, Proxmox, Snort, and VirusTotal on limited/outdated hardware.
- Ran multicloud simulations and penetration testing to validate defensive configurations.

Network Intrusion Detection System (NIDS) Jan 2026

- Programmed a custom Python NIDS with rule-based detection for attack vectors and unauthorized access attempts.

EDUCATION

MSc in Cybersecurity Sept 2025 - Dec 2026
Lancaster University, School of Computing and Communications
Grade (current): Distinction

BSc (Hons) in Computer Science Sept 2021 - Apr 2025
Università degli Studi di Camerino

SKILLS

Security	Penetration Testing, Digital Forensics, Risk Management, Cyber-Informed Engineering, ISO/IEC/ITIL
Offensive	Kali Linux, Nmap, Metasploit, Ghidra, Nessus, MITRE ATT&CK, SQLMAP, John the Ripper
Defensive	Wazuh, pfSense, OPNSense, Snort IDS, Wireshark, ELK Stack, VirusTotal
Network / Virt.	GNS3, Cisco Packet Tracer, TCP/IP, Docker, Proxmox, VMWare eSXi, VirtualBox
Development	Python, C#, Java, Bash/PowerShell, SQL, Git
Soft Skills	Teamwork, Leadership, Communication, Problem Solving, Self-Improvement

LANGUAGES

Italian (native) ⋄ English (C1, IELTS 7.5) ⋄ Hindi & Punjabi (professional working proficiency)
